

Enabling AI/ML through data maturity

FACT SHEET

Biopharma's data landscape has changed. AI/ML have evolved from "whiteboard dreams" to industry best practice. These technologies promise to radically improve scientific progress at every stage of drug development, from R&D through QC & manufacturing.

However, AI/ML leaders have a problem. AI/ML is not possible without connected ecosystems, centralized data stores, and harmonized, enriched, analytics-ready data. In other words, biopharmas lack the data maturity AI/ML requires to function. That's where TetraScience comes in.

TetraScience is the only company equipped to build AI/ML-enabling data infrastructures, end-to-end, for the biopharmaceutical space. Currently trusted by 12 of the top 25 top biopharmas, TetraScience provides both the scientific data cloud services and the "Sciborg" expertise needed to mature data quickly and leverage that data with AI/ML techniques.

Unlock your data and unleash your AI/ML with the Tetra Scientific Data and AI Cloud™

Collect data from instruments and applications

Centralize data in the cloud for easy access

Contextualize data with metadata to provide context and facilitate search

Engineer raw data into the compliant, liquid, actionable, harmonized AI/ML-ready Tetra Data
